

What is a Template

The Eureka Templates are custom-made tools made on our CNC machines that, during the furniture manufacturing process, are used as patterns to replicate specific furniture pieces. In general, templates are used to make pieces with curved lines or irregular designs and shapes. Templates help ensure that all the chairs have consistently the same elements.

The template is used by laying it down on top of the raw board of wood and then tracing the pattern. Finally, the traced piece is cut to match the template.

Templates also save considerable layout time and produce more consistent, accurate results.
